On behalf of the SIS (Senologic International Society) and PTBnRP (Polish Society for Breast Cancer Research) we cordially welcome you to the 19th SIS World Congress on Breast Healthcare, on May 5-8, 2016 in Warsaw, Poland.

Similar to our hosts in Orlando, we want to show dynamism and innovation of clinical and diagnostic breast health. Warsaw as a vigorously growing city is perfectly suited for the task.

The congress is a great opportunity to meet scientists, experts and supporters of the promotion and development of medicine. Our guests will participate to numerous lectures, meetings, panel sessions, poster presentations and workshops. We will also discuss organizational issues, with a particular focus on complex approach for treatment of breast cancer in our part of Europe. Social aspects of breast cancer and diagnostic issues will also be discussed.

In parallel will take place the National Conference on Diagnosis and Treatment of Breast Cancer FALENTY, which gathers every two years, approx. 500 oncologists, oncology surgeons, diagnosticians from all around Poland. This event is one of the most important in the calendar of the Polish Society for Breast Cancer Research. We are confident that the meeting of so many experts in one place will be an inspiration for further research and development of medicine and related sciences in the field of breast disease.

We believe that this event will be an excellent place to broaden knowledge and meet interesting people.

Welcome to Warsaw
